Task 2: Phone Number Analysis

Findings: No phone numbers were found in the file `image.gen1.dmg`.

After a complete scan, no data matched the phone number patterns. This confirms that this specific image segment does not contain any contact information.

Task 1: Recovery of Deleted Files

- **What was found:** I successfully recovered the hidden text content from the deleted files.
- **The Data:** * `This is file 1 - snarf`
    - `This is file 2 - snarf`
    - `New file 1 contents - snarf`
- **Method:** Used the **`strings`** command to extract readable text from the binary image.

Task 2: Search for Phone Numbers

- **What was found: No phone numbers** were found in this specific file (`image.gen1.dmg`).
- **The Process:** I searched for both **10-digit** and **11-digit** patterns using **Regex** (Regular Expressions).
- **Conclusion:** The analysis confirms that no contact information or phone numbers are stored in this data segment.
